

EmotivPRO is our integrated software solution for neuroscience research and education, built for Epoc+ and Insight.

EMOTIVPRO

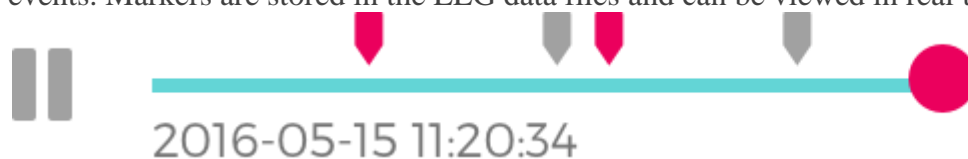

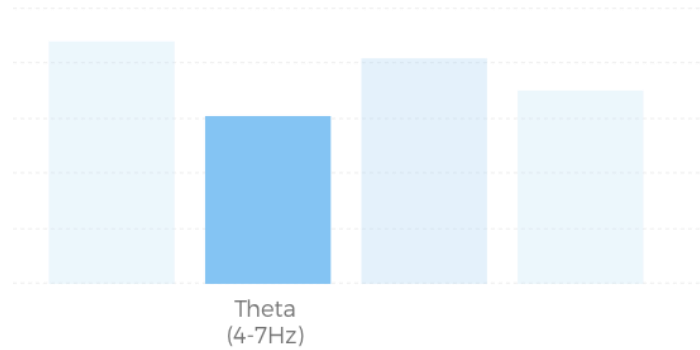

Data acquisition

View a real time display of EMOTIV headset data streams including raw EEG, motion data, data packet acquisition and loss, and contact quality. Save recordings to our secure cloud storage and playback or export for analysis at any time.

Event marking

Define and insert timed markers into the data stream, including on-screen buttons and defined serial port events. Markers are stored in the EEG data files and can be viewed in real time and playback modes.

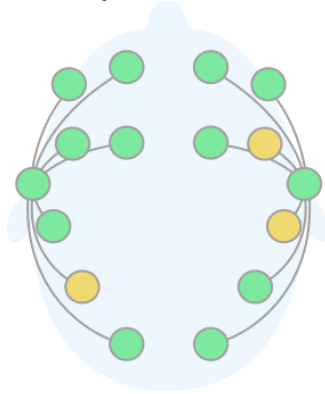

Quick Analysis

Customize and view frequency data for live or recorded data with automatic FFT and power band graphs. Get results without having to export your data.

Simple integration

Seamless integration with Emotiv hardware and cloud lets you connect and setup your device and manage your licenses and sessions within our user-friendly interface.

EmotivPRO includes

-  Unlimited recordings
-  Online and offline mode
-  Cloud storage
-  Access from multiple devices and by multiple users
-  PRO level Cortex access with unlimited sessions
 - 5 second rolling time window in chart recorder mode
 - All or selected channels can be displayed
 - Automatic or manual scaling in individual channel display mode
 - Adjustable channel offset in multi-channel display mode
